

OVERVIEW

Welcome to Webster software for operating the Walk-and-Talk (for Windows® only), TS (touch sensitive), LT (laser tracking), IRP (interactive rear projection), and IPD (interactive plasma display) interactive whiteboards.

WHAT IS WEBSTER?

Webster is interactive electronic whiteboard software for your Windows or Macintosh computer that enables you to capture a snapshot of anything you write or draw on your PolyVision interactive whiteboard. Webster software records all whiteboard activity for you to save, use in other applications, print, or distribute.

There are Many Ways to Use Webster

Use Webster during a presentation or meeting to capture notes and ideas. You can remain at the whiteboard; Webster gives you the tools you need to write, erase, print, or capture a copy of the board.
